## FOR IMMEDIATE RELEASE

### Kenosha Truck Parts Begins Distribution of Popular Ramp Products

*Kenosha Truck parts adds lineup of aluminum ramps including: LB20 – Loading Ramp, LT30 – Extended Ramp, LB10 – Side Door Ramp, and LSR90 – Swivel Ramp.*

**KENOSHA, Wisconsin (June 26, 2025)** – Kenosha Truck Parts (KTP), is excited to announce a distribution agreement with Link Mfg., LTD, a trusted North American supplier in the trucking and transportation industry, to increase its portfolio of products for businesses who utilize cargo vans to transport their cargo and equipment. This collaboration will allow Kenosha Truck parts to distribute Link Mfg.'s popular lineup of aluminum ramps to customers who are seeking safe and efficient loading and unloading solutions for their cargo vans. The new distribution agreement includes Link Mfg.'s four aluminum ramp product lines: LB20 – Loading Ramp, LT30 – Extended Ramp, LB10 – Side Door Ramp, and LSR90 – Swivel Ramp.

*“We’re eager to continue expanding our product portfolio and offerings beyond suspensions,” said Jeremiah Gilmore, customer service manager at Kenosha Truck Parts. “The opportunity to distribute ramps will directly contribute to enhancing the safety and efficiency of the fleets we currently serve, while expanding our customer base to support a variety of businesses, like landscaping, lawn care, deliveries, construction and more.”*

Link’s LB20 Loading Ramps are known for being fast, easy and convenient to deploy, stow and use. These ramps can be unfolded and folded back into a vertical, low-profile storage position at the rear of the vehicle. Most of the models are standard with a spring-assisted lifting system. Depending on the model, the LB20 Series weighs between 96 and 240 pounds and has a weight capacity of 1,000 and 2,000 pounds.

The LT30 Extended Ramp provides a lower degree angle of entry for businesses whose cargo or equipment requires a shallow load angle for safe management. The ramp increases loading and unloading efficiency while reducing dangerous lifting and possible equipment damage during transfer from the vehicle to the ground. The LT30 Series’ capacity is 1,000 pounds and weighs between 110 to 140 pounds, depending on the model.

Link’s LB10 ramp is designed to mount in commercial cargo vans with a sidestep, providing greater

versatility for loading and unloading. By stowing vertically inside the vehicle's sidestep, the ramp is not exposed to the weather or road debris and takes up less than 12 inches of horizontal space. The LB10 series weighs between 82 to 108 pounds with a weight capacity of 1,000 pounds.

The LSR90 Swivel Ramp provides unmatched flexibility for loading and unloading cargo. The swivel design of the LSR90 enables the ramp to swing like a door, up to 180-degrees. The swivel ramp mounts in the rear stored position like a traditional folding ramp, but can also swing to be stored inside, behind the wheel well. When not in use for loading or unloading, the ramp rotates outside of the vehicle for unobstructed access. The LSR90 Series Swivel Ramp weighs between 157 to 225 pounds and its weight capacity ranges between 1,000 and 1,500 pounds, depending on the model.
